

Django Project: movieproject

Create a Django project named **movieproject** that contains one app named **movies**.

1. Home Page

URL: 127.0.0.1:8000/

The home page should contain 2 links:

HOME ABOUT

- Clicking **HOME** should reload the home page.
- The page heading should be: Movie Collection

Search Form

Create a search form with the following fields:

- ID
- Movie Name
- Genre
- Rating
- Release Date

Provide a **Search** button.

Movie List

Display movie records in a table with the following columns:

ID	Movie Name	Genre	Rating	Release Date
----	------------	-------	--------	--------------

Data should be fetched from the database.

Search Conditions

Use **icontains** lookup for all search fields.

If multiple search fields are entered, records must be filtered using **AND** condition.

Detail Navigation

When a user clicks on a Movie ID, it should open the corresponding movie detail page.

Example:

127.0.0.1:8000/details/4/

2. About Page

URL: 127.0.0.1:8000/about/

Display:

about page

3. Movie Detail Page

URL: 127.0.0.1:8000/details/<id>/

Display complete information about the selected movie.

Show Following Fields

- ID
- Movie Name
- Genre
- Rating
- Release Date

Provide a **Back** link to return to the Home page.

Example:

127.0.0.1:8000/details/4/

Database Requirements

Create a model named **Movie** with the following fields:

Field Name	Data Type
movie_name	CharField
genre	CharField
rating	IntegerField
release_date	DateField

Admin Requirements

- Register the Movie model in Django Admin.
 - Add at least 5 movie records through Admin Panel.
-

URL Requirements

Page	URL
Home	127.0.0.1:8000/
About	127.0.0.1:8000/about/
Detail	127.0.0.1:8000/details/<id>/

Search Test

Suppose the database contains:

Movie Name	Genre	Rating
Avatar	Sci-Fi	8
Titanic	Romance	9
Avengers Endgame	Action	9
The Dark Knight	Action	9

If the user enters:

Genre = Action

Rating = 9
